ROLL NO.-2300290100245

DOMAIN- MLSA INTERNSHIP (Full Stack Web Development)

### Report on Completion of MLSA Internship

I'm excited to share that I finished my MLSA internship! I worked hard, completed all the modules, and earned 41 badges. This experience really helped me understand web development better, and I've developed a strong interest in it.

#### Introduction:

During my internship, I learned a lot about web development, including HTML, CSS, and JavaScript. The program was really helpful because it took a step-by-step approach, making it easy for me to understand and use what I learned right away. Finishing all the modules improved my skills and gave me more confidence in working on web projects.

#### Projects Developed:

##### 1. Create a personal webpage:

I built a basic personal web page using HTML and CSS to highlight my profile. The page includes my profile picture, a brief bio about my background and interests, and links to my social media accounts. I aimed for a simple and user-friendly layout, making it easy for visitors to access the information. This project enhanced my web development skills and showed me how important effective design is for presenting myself online.

##### 2. Create a Simple Calculator:

I built a simple calculator using JavaScript that can do basic math operations: addition, subtraction, multiplication, and division. It has an easy-to-use interface with input boxes for numbers and buttons for each operation. I used HTML for the layout, CSS for styling, and JavaScript for the functions. This

project helped me improve my coding skills and taught me how to combine different web technologies to make an interactive tool.

### Conclusion:

The MLSA internship has been a fantastic experience for me. I learned a lot of new skills and found my passion for web development. I'm excited to use what I've learned to create more projects in the future. With the knowledge I gained, I look forward to exploring new opportunities in web development and making a positive impact in this field.
